CAUTION

- Take care to avoid static electricity as it can easily damage the LSI (TMS1943NL) used in model SM-3750.
- 1. Never touch the terminal of LSI with bare fingers.
 - 2. Never bring the terminal of LSI into contact with other materials.
 - 3. Use the LSI getting in conductive foam rubber.
 - 4. When using a soldering iron, it is recommendable to connect it to the ground.

4. DIGITAL CLOCK OPERATION

3-3 TURNTABLE SECTION

■ TRACKING FORCE AND ANTI-SKATING ADJUSTMENT

(Note: This adjustment is important. Refer to Figure 25.)

- (1) First remove the stylus cover. Refer to Figure 25.
- (2) Check that the cue lever is in the down position, and that the tone arm itself is free to move from the arm rest.
- (3) Set the anti-skating mechanism to "0".
- (4) Rotate the counter weight clockwise or counterclockwise until the tone arm is equally balanced. Set the tracking force scale to "0" (without moving the counter weight).
- (5) Rotate the counter weight so that the dial reads "2.0".
- (6) Set the anti-skating mechanism to "2.0".

Figure 25.

■ TURNTABLE PLATTER SPEED ADJUSTMENT

- (1) Press the speed selector button 00 and perform fine adjustment of the turntable platter speed while watching the stroboscope 00. (Figure 26)
- (2) Rotation is speeded up by turning the speed control knob 00 in the "F" direction and slowed down when turned toward "S". Correct rotation is attained when the relevant stroboscope markings appear to be stationary.

Figure 26.

■ OVERHANG ADJUSTMENT

When replacing a cartridge, it will be necessary to adjust the overhang. As has been indicated in Fig. 26, the distance from the stylus tip to the point of connection to the tone arm should be exactly 50mm. When mounting the new cartridge, this distance is adjusted by means of the screw which holds the cartridge in place in the head shell.

Figure 27.

4-1 DIGITAL CLOCK SECTION

Besides the function of the digital clock mechanism, Radio, Turntable and Cassette Deck can be operated automatically by setting the clock to the desired time.

4-2 DIGITAL CLOCK OPERATIONS (See figure 28.)

■ TIME ADJUSTMENT

For time adjustment, push the FAST or SLOW button with the SETTING switch placing to TIME position. It is better to begin with FAST, then adjust the time precisely with SLOW. There is no need to worry about the possible power suspension on the way of adjustment, since the sleep function still works in this case.

Push the SECOND ADJ. button to synchronize the second of the clock by the time signal of broadcasting etc. in the same way as the TIME ADJUSTMENT. This displays correct second but for hour and minute.

■ TIME SETTING FOR ALARM

Do the same as TIME ADJUSTMENT with the setting switch placing to START position. This will ensure the time when the set starts playing.

■ AUTOMATIC OPERATION OF CASSETTE RECORDER/TURNTABLE/RADIO

CASSETTE RECORDER

To operate the Cassette Deck automatically at desired time, proceed as follows:

1. Place the FUNCTION Switch to OFF and PLAY Switch to TIMER position.
2. Set the cassette tape.
3. Push the PLAY button in.
4. Place the FUNCTION Switch to AUTO position.
5. Cassette Recorder will start to play at preset time by proceeding the above steps in correct order.

TURNTABLE

1. Place the FUNCTION Switch to OFF and the PLAY Switch to TIMER position.
2. Set the disc on the turntable, rotate the platter 1/8 of a turn by hand if it is failed to do this, the turntable may not operate automatically at the chosen time.
3. Release the tone arm from arm-lock and pull the PLAY/CUT Lever toward you.
4. Keep the FUNCTION Switch in AUTO position.

RADIO

1. To listen to radio, proceed in the same manner as above after selecting the station with the Tuning Knob.

NOTE: Be sure to set the Selector Button and Volume level according to your desired play.

4-3 TIME ADJUSTMENT PROCEDURE

Figure 28.

4-4 SAFETY DEVICE

This is designed to let cassette tape reach to the end if it stops halfway, noticing that auto shut off works necessarily at tape-end. Even if function switch of timer is positioned to "off", auto rec./play mechanism will begin to work by Auto within 24 hours on the condition that any key of deck is pushed down and keep set in the same position as "Auto". In this case, auto rec./play keeps on working until auto shut off mechanism will function at tape end.

Figure 29.

This will result in sudden play of deck against owner's intention, however it may be accepted as a safety measure which ensure the life of mechanism. It will happen only once even using the longest tape of C-120 (60 min. one way), thus we think you will not be so troubled about this if the mechanism is well understood.

DIAL CORD STRINGING

- Set the tuning capacitor to the minimum capacitance (Fully Clockwise Position).
- Wind the dial cord in the numerical sequence as shown in figure 30.

Figure 30.

- Keep the dial cord pulling at *, and hook the dial cord on the small pulley at 8.
- Hook the dial spring on the drum.
